

Chheda Jewellers - Gold Rate Automation

Final confirmed plan | Manual rate entry | Sept 2026

CONFIRMED: Admin enters the rate → Save & Approve → at **7:00 AM IST** the system auto-posts to **Instagram Feed + Story** and **WhatsApp (opted-in customers)**. Instagram Broadcast Channel and WhatsApp Channel/Community get a **1-tap staff share**. The system **never invents or changes a rate**.

1. Where the rate goes

Destination	Mode	How (official only)
Instagram Feed post	AUTO	Instagram Graph API - content publishing
Instagram Story	AUTO	Instagram Graph API
WhatsApp - opted-in customers	AUTO	WhatsApp Cloud API approved template (paid per message)
'RATE' keyword auto-reply	AUTO	Customer DMs RATE on Instagram / WhatsApp → gets today's approved rate
Instagram Broadcast Channel	1-TAP STAFF	No API exists - staff shares in 1 tap
WhatsApp Channel / Community	1-TAP STAFF	No API exists - staff shares in 1 tap
Bulk Instagram DMs / WhatsApp Web bots	NOT ALLOWED	Against Meta rules - account ban risk

2. Daily flow

When	What happens
Anytime before	Admin enters date + 24K / 22K / 18K (+ optional purities) per gram → Save → Preview → Approve
6:30 AM	Health check: tokens valid? today's rate present? Warn admin if not
7:00 AM	Rate found → auto-post Instagram + WhatsApp, send share task to staff
7:00 AM	Rate missing → send NOTHING, alert admin 'Today's rate is missing'
Until cutoff	Re-check every 15 min; send as soon as approved (cutoff time is set by admin)
After cutoff	Skip the day and log the reason - an old rate is never sent

3. How the 1-tap staff share works

- At 7:00 AM staff get a **phone notification** from the Chheda staff web app.
- Tap it → the share page opens with the **ready image + caption** (caption copied automatically).
- Tap **Share** → pick the WhatsApp Channel / Instagram Broadcast Channel → paste → send.
- If the share sheet doesn't show the channel: image is saved to gallery, open the channel, paste, send.
- Tap **'Mark posted'** → dashboard turns green. Not done in 30 min → reminder to staff + admin.

4. Key rules

- **Admin-entered value is the only source of truth** - no auto-calculation, no rounding, no API.
- **Same admin enters and approves**; every save and change is logged (who, what, when).
- **Validation only blocks, never edits**: all rates filled, 24K > 22K > 18K, sane range (catches extra zero), big day-change needs a reason.
- **Locked after sending**; corrections are logged. **No duplicate posts** even if Send Now is clicked twice.
- **Custom settings**: send time (default 7:00 AM), late cutoff time, automation ON/OFF, channels on/off.

5. Admin dashboard

Section	Includes
Rate entry	Date, 24K, 22K, 18K, optional purities, Save/Update, Preview message
Actions	Test Send (admin only), Send Now, Automation ON/OFF
Schedule	Send time, late cutoff time, next scheduled send
Status	Instagram / WhatsApp connection, today's delivery per channel, staff share status
History & logs	Rate history, delivery logs, success / failed status, alerts

6. Tech & security

Part	Choice
Frontend	Next.js admin dashboard + staff share web app (installable on phone)
Backend	Node.js + Express API, separate worker for the 7 AM job
Database	MongoDB: rates, deliveries, settings, users, alerts, audit logs, subscribers
Scheduler	node-cron (Asia/Kolkata), job lock, auto-recovery if server restarts, retries
Security	Secure login, 2-step verification option, roles, encrypted Meta tokens, rate limiting

7. Needed from Chheda before launch

- Meta Business verification + developer app review (Instagram publishing permission).
- Instagram **Business/Creator** account; a **dedicated WhatsApp number** + approved message template.
- A **customer opt-in** method (QR code in store, website form, 'JOIN' keyword).
- Brand assets (logo, colours) for the daily rate image.

8. Development phases (approx. 6-8 weeks)

Phase	Work	Time
0	Meta approvals, WhatsApp number & template, opt-in setup	1-3 wks (parallel)
1	Login & roles, rate entry, validation, history, audit log	1 wk
2	Rate image + caption, Preview, Test Send	3-4 days
3	7 AM scheduler, missing-rate alerts, custom cutoff, retries	1 wk
4	Instagram + WhatsApp posting, staff 1-tap share app	1-1.5 wks
5	'RATE' keyword auto-reply	3-4 days
6	Dashboard: status, logs, settings	1 wk
7	Security, testing, 1-2 week trial run, go-live	1-2 wks

Meta capabilities checked Sept 2026 (Meta for Developers docs). Meta features can change; re-check before launch.
